Tests for SAR are conducted using standard operating positions with the device transmitting at its  
 highest certified power level in all tested frequency bands. The maximum SAR values tested on this  
 device when used in its normal position at the ear and when used close to the body (at a minimum  
 distance of 0mm) are:

|                                                        |                 |           |
